ASHOK KUMAR S

ashokkumar1010494@gmail.com | +91 6385636085 | linkedin.com/in/ashokkumars12 | Chennai, TN

PROFESSIONAL SUMMARY

Senior Software Engineer with 4+ years of experience designing and delivering scalable, secure, cloud-native microservices using Java, Spring Boot, and AWS. Proven track record of building resilient REST APIs, optimizing distributed systems with reactive and asynchronous patterns, and automating CI/CD pipelines integrated with DevSecOps quality gates.

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot, Spring WebClient, Spring Data JPA, Spring Security, REST APIs, SOAP, CompletableFuture, JUnit, Maven, SQL, Python
Cloud & Infrastructure: AWS (ECS, ECR, ALB), OpenShift Container Platform
DevOps & CI/CD: Docker, Terraform (IaC), Jenkins, CI/CD Pipelines, uDeploy
Databases & Caching: PostgreSQL, Oracle, Redis, JDBC
Security & Quality: OAuth2, JWT, HashiCorp Vault, SonarQube, Checkmarx (SAST), Nexus IQ
Observability & Tools: Dynatrace, Splunk, Git, Postman, IntelliJ IDEA, Jira, Agile/Scrum
Frontend (Working Knowledge): Angular, HTML, CSS, JavaScript, TypeScript

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Tech Mahindra, Chennai, TN **Jul 2026 – Present**

- Developed and maintained **10+ Java Spring Boot 3.x microservices** for a Group Benefits platform serving enterprise clients, applying RESTful API design and layered architecture (Controller, Service, DAO, Repository, Entity).
- Implemented **asynchronous parallel API calls using @Async and CompletableFuture**, reducing response latency by executing independent downstream service calls concurrently.
- Deployed containerized microservices on **AWS ECS with auto-scaling** (min 2 / max 6 tasks) based on memory utilization, and configured **AWS ALB** with round-robin load balancing, session stickiness, and health checks for zero-downtime deployments.
- Engineered multi-stage CI/CD pipelines using **Jenkins, AWS CodePipeline, and Terraform**, enabling fully automated, infrastructure-as-code deployments from commit to ECS.
- Implemented **Redis distributed caching** as a shared cache layer across microservices, reducing repeated calls to external APIs and improving response times.
- Secured runtime configuration using **HashiCorp Vault**, eliminating hardcoded credentials and strengthening application security.

Software Engineer | Cognizant Technology Solutions, Chennai, TN **Oct 2022 – Jun 2026**

- Built high-performance **REST APIs with Spring Boot and PostgreSQL/Oracle**, backed by JUnit tests and JaCoCo coverage enforcement, supporting thousands of daily requests with sub-200ms latency.
- Diagnosed and debugged application issues in lower environments using **Splunk and JBoss console** for log analysis and **Dynatrace** for performance monitoring to identify and resolve application defects before release.
- Implemented **Tealium Analytics event tracking** in **Angular UI components** to capture user interaction metrics, enabling product analytics and feature usage insights.
- Improved **code quality by 25%** through SonarQube-enforced standards and remediated **critical vulnerabilities by 30%** using **Checkmarx (SAST)**, static analysis, and OWASP best practices.

EDUCATION & CERTIFICATIONS

Panimalar Engineering College, Anna University **Aug 2018 – Jun 2022**
B.E. Electronics and Communication Chennai, India

Certification: AWS Certified Cloud Practitioner — Amazon Web Services
